Crystal Light Therapy® Giver of Health

For thousands of years, Quartz crystals have been used for their curative virtues of purification. Quartz release perfectly the energy to bring about its optimal state, everywhere the body needs it. The Quartz used in Crystal Light Therapy were formed two millions years ago from heat, gas and liquid minerals in the heart of the earth.

The Therapy: the Crystal bed is a subtle blend of Chromotherapy, Lithotherapy and Musicotherapy.

The Quartz Crystals are living molecular masses where the energy is increased thanks to the light crossing through them. The Crystal Light Therapy uses this suitability and gives it its optimum thanks to a combination of light and colors. Each Crystal is crossed through by a light which colour corresponds with the chakras (center of energy) towards where it's pointed on the body. Each chakra is irradiated by a beam of light that passes on the crystal energy by the colour's increased frequency.

Because of its positive/beneficial stimulation of the immune system at a high and guaranteed level, the Crystal Light Therapy is recommended for any case of physical or psychological problems, or for anti-aging result.

How does a session take place?

The patient is not touched during a session of Crystal Light Therapy. The patient is lying. Seven curative Crystals from the Casa are hanging at 30 centimeters from the body. The chakras are irradiated during 20 minutes with their respective colors and frequency on a precise rhythm. Tapering tipped, the crystals act as natural lasers that focus, accelerate, increase the energy into a tight beam of light pointed at the centers of energy.

Why 20 minutes? This is the time that a crystal needs to reach its perfect fusion. At this moment, the union between the body's energy and the crystal's one is created. This is the unity between body, space and earth.
